FOR IMMEDIATE RELEASE

## OREGON RESOURCES CORPORATION NEARS COMPLETION OF PLANT

Oregon Resources Corporation (ORC) is pleased to report it is in the final stages of commissioning for the foundry market's newest specialty sand, SpheriChrome. Targeted for large ferrous applications, SpheriChrome differentiates from conventional sub angular chromite in its round shape and finer grain size.

SpheriChrome is mined and processed in Coos Bay, Oregon. ORC employs low-impact mining and processing techniques with no blasting, crushing, or use of environmentally harmful chemicals. SpheriChrome is anticipated to start shipping out of the plant during the first week of June 2011.

If you would like more information about SpheriChrome, please contact the North America distributor, HA International LLC. Mitch Patterson with HA International is available at 630-575-5712, or [mitch.patterson@ha-international.com](mailto:mitch.patterson@ha-international.com).
